### Accessibility Questions

- What corrections did you have to make, and how did you make them?
  - Add the language tag, so that screen readers know that the language of the website is English
  - Add alternative texts for the images (or tracks, artists, and albums)
  - Add a label to the search box
- Is this interface functional without the use of a mouse? Why or why not?
  - The website is tabbable. The play button is easily used with a space bar (play, pause). It is absolutely possible to use the website without a mouse.
- What are other accessibility tests or features you added or would be interested in learning about?
  - I would be interested in finding a way to use direction keys in navigating websites. As of now, to navigate the website, you can only use the tab key or shift+tab. It would be great if you could just use direction keys, which may make the navigation more intuitive and simpler.
